

# PUT YOUR CYBER SAFE TRAINING TO THE TEST

Now that you're a cyber security expert, it's time to make sure your entire family is on the same level. Using what you learned playing **Get Cyber Safe Agency**, ask a parent, guardian or trusted adult to help you finish this list. Once **every item on the list below** is checked off, you'll have helped your whole family get cyber safe!

## ACCOUNTS

- Make a list of all your online accounts
- Use a different passphrase for every account you have
- Make sure all your passphrases are at least 15 letters long and made of 4 or more random words
- Don't share your passwords with anyone else (except your parents, guardians or trusted adults)
- Turn on multi-factor authentication (MFA) for all accounts that use it

## DEVICES

- Make a list of all the devices your family uses that connect to the internet
- Get your parents, guardians or trusted adults to help you install anti-virus software on any device you can
- Turn on automatic updates for any software if you can
- Turn off your devices when you're done using them

## CONNECTIONS

- Change the default name and password of your Wi-Fi network if your parents, guardians or trusted adults haven't already
- Place the Wi-Fi router in a safe spot near the center of your home and away from a window
- Create a guest Wi-Fi network for your smart devices or for when you have friends over

**Great job! You've just helped everyone get cyber safe!**

But your job isn't done yet. Make sure to keep staying cyber safe when you're online, and always get **a trusted adult's permission** before securing your devices. Don't be shy to ask for help if you see anything you don't understand.
